

Don't ignore any of these symptoms

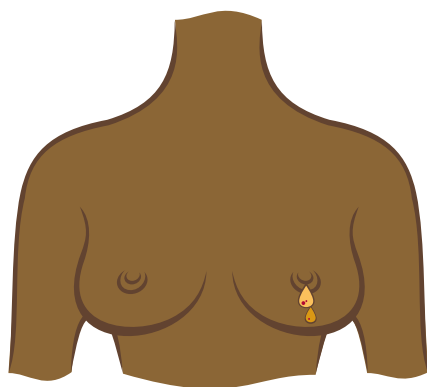

It could be breast cancer.
Finding cancer early can save lives.

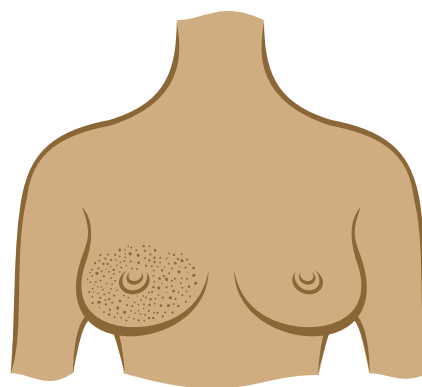

Any breast or armpit lump or hardening, with or without pain

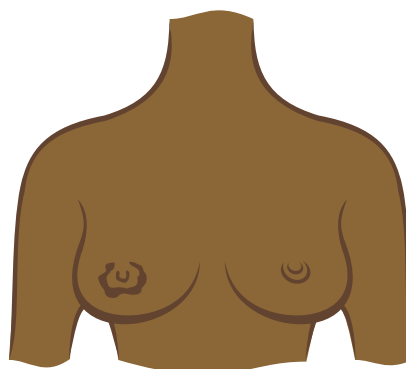

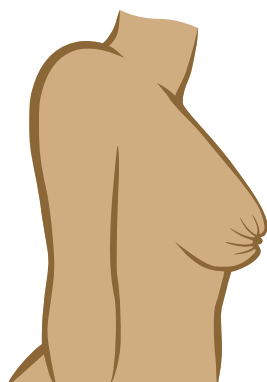

Change in size, shape or look of the breast

Abnormal or bloody fluid from the nipple

Change in breast skin, such as dimpling (like orange peel), redness or darkening

Change in shape or look of the nipple, such as it is being pulled inwards

Visit your local clinic or community health worker
even if you are not worried.
